The Interactive Space Filter is a great planning tool that allows students to see up to the minute available spaces in any building. Students will be able to view spaces any time throughout the selection process. It is easy to navigate and students can view spaces with friends and create a wish list of buildings and / or rooms where they would like to live before actually selecting a room assignment. Finally, it gives students a chance to predict likely availability of space(s) in a desired location before their assigned appointment time.

The Interactive Space Filter is convenient, easy to use and always up to date. Check it out!
